

Document 2: Comprehensive Product Warranty Guide

Version: 2026.1.B

1. Warranty Coverage Matrix by Product Category

TechMart collaborates with authorized distributors and manufacturers to provide robust warranty protections. Warranty durations vary significantly based on the engineering complexity, usage patterns, and category classifications of the products.

The comprehensive breakdown below outlines the standard warranty periods assigned to products purchased directly from TechMart:

- **Tier-1 Consumer Electronics (24-Month Warranty):** This category includes high-performance laptops, desktop workstations, tablets, smartphones, smart televisions, and central processing units (CPUs). These devices carry a complete 2-year warranty against internal component failures.
- **Tier-2 Smart Home and Audio Equipment (12-Month Warranty):** This covers smart home hubs, security cameras, robotic vacuum cleaners, wireless soundbars, active noise-cancelling (ANC) headphones, and smartwatches.
- **Tier-3 Computer Peripherals and Components (12-Month Warranty):** Includes standalone motherboards, graphics cards (GPUs), solid-state drives (SSDs), mechanical keyboards, and gaming mice.
- **Tier-4 Power and Charging Accessories (6-Month Warranty):** Covers lithium-ion power banks, GaN (Gallium Nitride) wall chargers, multi-port hubs, docking stations, and braided high-speed data cables.
- **Tier-5 Consumable Electronics and Wearable Bands (3-Month Warranty):** Applies to basic replacement parts, silicone fitness bands, stylus tips, and disposable battery packs.

2. Inclusions and Strict Exclusions Policy

Understanding the boundaries of your product protection is critical. The TechMart warranty is explicitly designed to safeguard your investment against structural and manufacturing anomalies, while placing the responsibility of general upkeep on the user.

What is Strictly Covered (Inclusions):

- **Defects in Materials:** Structural imperfections in the chassis, housing, or framing that occur during the factory molding or assembly process.
- **Workmanship and Assembly Errors:** Faulty internal soldering, loose ribbon connectors, or misaligned sensor modules directly attributable to factory production line errors.
- **Internal Hardware Failures:** Spontaneous motherboard failure, dead screen pixels (exceeding the industry standard of 3 dead pixels), integrated power supply malfunctions, and non-accidental hard drive degradation.

What is Strictly Excluded (Exclusions):

- **Accidental and Environmental Damage:** Physical fractures, cracked screens, dents, or chassis bending caused by drops, impacts, or operational neglect. Liquid ingress, corrosion, or oxidation resulting from exposure to moisture, extreme temperatures, or humidity.
- **Electrical and Voltage Surges:** Damage caused by fluctuating voltage, improper power supplies, lightning strikes, or connecting the device to non-certified charging equipment.
- **Unauthorized Modifications:** Any device that has been opened, repaired, altered, or modified by a technician or service center not explicitly authorized by TechMart or the original equipment manufacturer (OEM). This includes rooting, jailbreaking, or installing non-official custom firmware.
- **Normal Wear and Tear:** Gradual depletion of consumable parts over time, such as the natural capacity reduction of lithium-ion batteries, cosmetic scratches, or fading text on keyboard keycaps.

3. Step-by-Step Warranty Claim and Triage Workflow

To initiate a hardware remedy, customers must adhere to TechMart's standardized digital triage process. This ensures that valid hardware issues are diagnosed accurately and routed to the correct technical team without administrative delays.

The Claim Process:

1. **Ticket Initiation:** Log into the TechMart Portal, navigate to "My Orders," select the product exhibiting issues, and click "File a Warranty Claim."
2. **Diagnostic Submission:** You must provide a comprehensive text description of the technical anomaly. Additionally, you are required to upload a short 30-second video demonstrating the hardware fault (e.g., a device failing to boot, or a display flickering).
3. **Remote Optimization & Triage:** A TechMart hardware specialist will review the ticket within **24 hours** and attempt a remote fix via email instructions (such as a factory reset or firmware update guide).
4. **RMA Generation:** If the issue is diagnosed as an inherent hardware fault, a Return Merchandise Authorization (RMA) number will be issued. TechMart will arrange a free courier pick-up of the device within **48 business hours**.
5. **Inspection and Resolution:** Once the device arrives at our diagnostic lab, technicians will verify the fault. Valid claims will be resolved within **10 to 14 business days** through either:
 - **Repair:** Swapping out the defective internal component with genuine OEM parts.
 - **Replacement:** Issuing an identical new or factory-certified refurbished unit if a repair is unviable.

4. International Warranty Regulations and Geographic Constraints

TechMart operates across multiple global regions, and warranty provisions are bound by local regulatory frameworks, regional supply chains, and international trade compliance structures.

- **Geographic Validity Limits:** Standard warranties issued during checkout are valid *only* within the country or economic zone where the product was originally purchased and delivered. For example, a laptop purchased and delivered within the United States cannot have its standard warranty serviced at a TechMart facility in Europe or Asia.
- **The TechMart Global Pass (Optional Coverage):** For customers who travel frequently, TechMart offers a premium upgrade called the "Global Pass Warranty" at checkout. This pass extends hardware coverage to any country containing an officially operated TechMart Fulfillment Hub or OEM-certified international service partner.
- **Cross-Border Logistics Liability:** If a customer relocates to a region where international warranty coverage is not supported, and they require a critical hardware repair, the customer is fully responsible for all international shipping freights, customs duties, import tariffs, and reverse logistics costs required to send the device back to their original purchase region for servicing.
- **Regional Voltage and Regulatory Compliance:** TechMart will not perform warranty repairs or replacements on items that fail due to cross-border operational incompatibilities, such as plugging a 110V appliance into a 220V grid without an industrial transformer.
